

Embracing the **HIGH CARBON LIFESTYLE**

Hon. Jason A. Isaac | [@ISAACforEnergy](#)

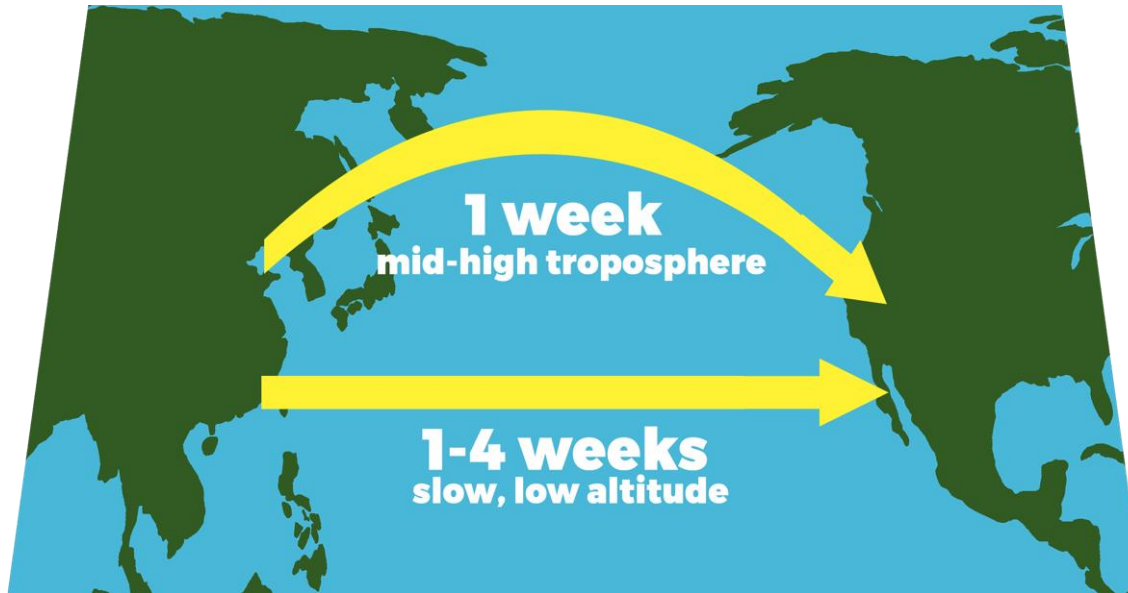

The US leads in clean air

- We've **reduced criteria pollutants by 78%** since 1970.
- Recent COVID shutdowns show just how clean our air is. In most cities, air quality did not meaningfully improve (and in some, it actually worsened).
- **62% of the population doesn't know this.**

Deep State “Climate” Rules: Exporting jobs, importing pollution

- Over 80% of mercury deposited in the U.S. is from natural sources and overseas emissions.
- The **tripling of ozone emissions from Asia** from 1988 to 2014 may have offset the 50% reduction in local emissions in the Western U.S.

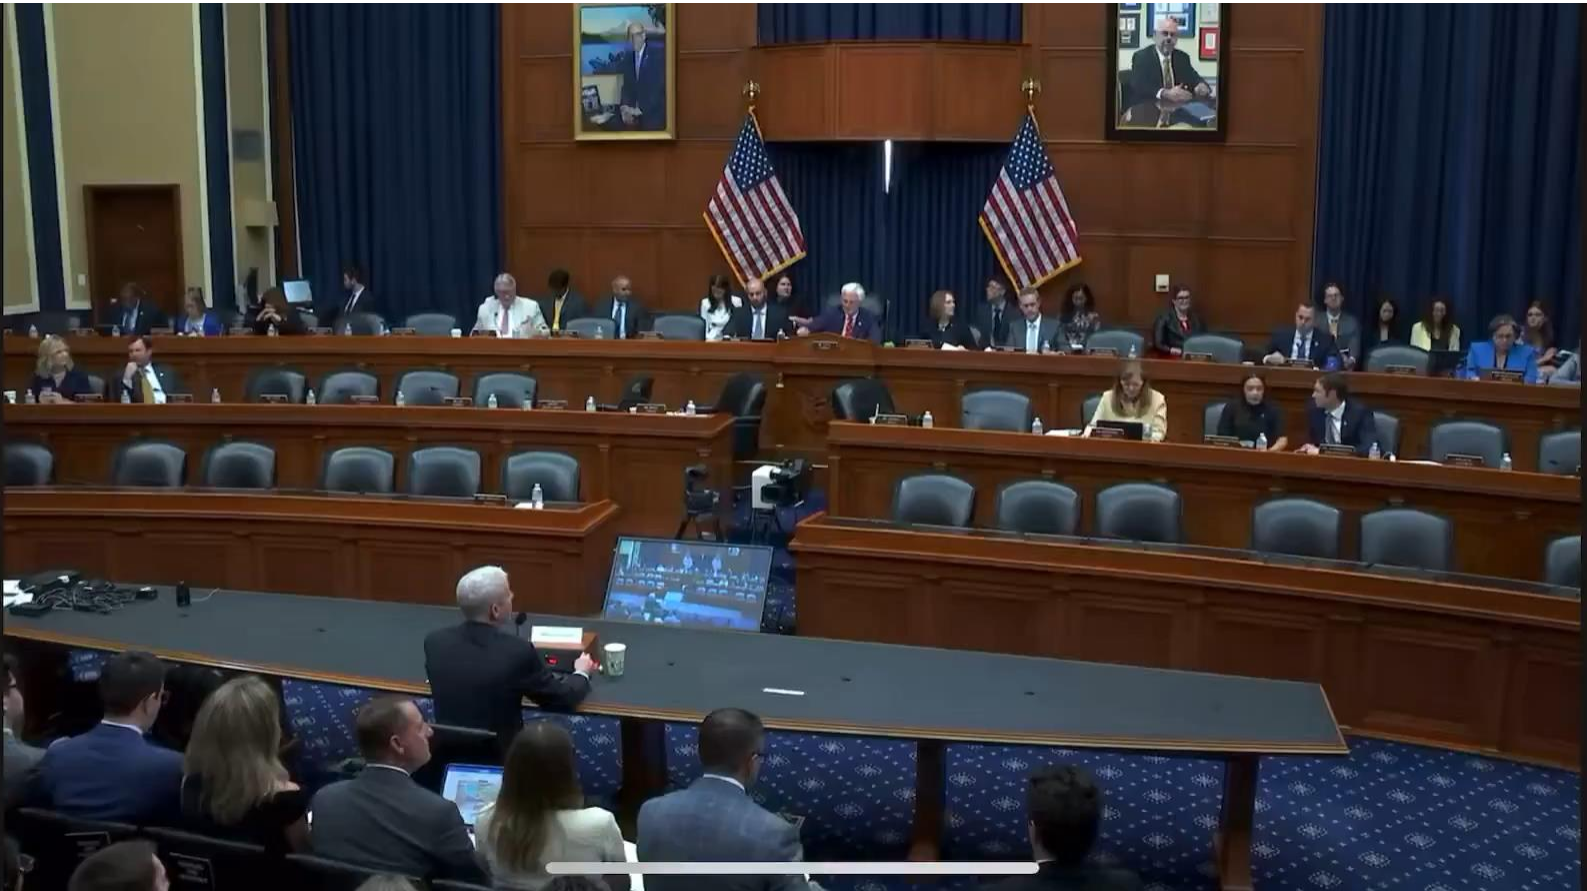

Expensive energy hurts the poor

The Two Hundred, et al. v. California Air Resources Board

“California’s climate change policies... have caused and will cause **unconstitutional and unlawful disparate impacts** to California’s minority populations.”

“The ‘net zero’ GHG threshold would operate unconstitutionally so as to **disproportionately disadvantage low-income minorities** in need of affordable housing relative to wealthier, whiter homeowners who currently occupy the limited existing housing stock...”

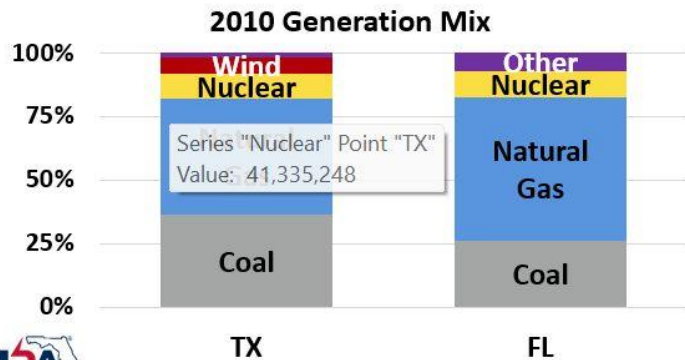

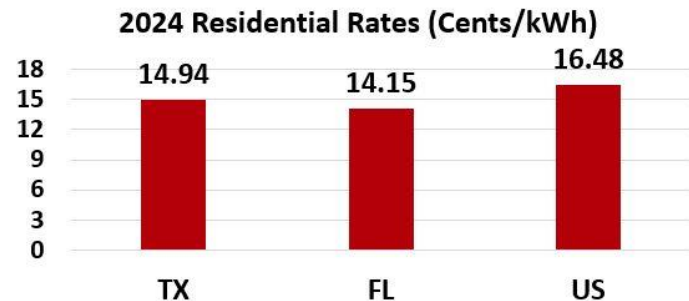

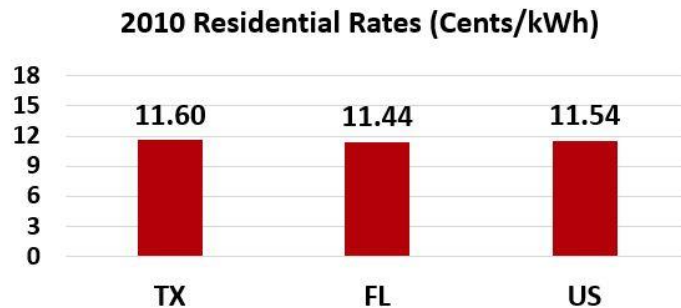

Why 'All Of The Above' Energy Policies Fail

Half of Peak Coal-Fired Generation Capacity to Close in U.S. by 2026

The peak of coal’s power generation capacity was in 2011, at 317.6 GW. Just 15 years later, in 2026, half of that capacity will be gone — replaced by gas, wind and utility-scale solar.

STATE LEGISLATION (& EXECUTIVE ACTIONS) ADDRESSING ESG FACTORS / PRACTICES

For Electronic Version w/hyperlinks, email: mnasi@jw.com

Nuisance climate change cases

- Two dozen far-left jurisdictions have filed state law claims against energy providers for public nuisance, fraud, or misrepresentation. These suits accuse providers of creating a public nuisance by causing climate change, or defrauding consumers by concealing information about climate change.
- The Environmental Law Institute's Climate Judiciary Project (CJP) hosts seminars to teach judges about climate science. CJP has hosted over 50 seminars for more than 2,000 state and federal judges since 2018.
- Leftwing entities have given significant sums to both the Climate Judiciary Project and the Collective Action Fund, the entity that pays Sher Edling to cover costs associated with the climate change cases

Why doesn't China care about decarbonization?

Because they already have a communist government.

**YOU ARE THE
CARBON
THEY WANT TO REDUCE**

Hon. Jason Isaac

Founder/CEO/”Carbon King”
@ISAACforEnergy

SUPPORT AMERICAN ENERGY SIGN THE PLEDGE...

You agree to actively support and promote the following key principles:

- 1 Affordable, reliable energy is the key to human flourishing.
- 2 American energy dominance is a benefit to our economy, quality of life, national security, environmental stewardship, and efforts to end poverty around the world.
- 3 Environmental policy should serve humanity, not the other way around.
- 4 Unleashing the power of free-market innovation, not government market manipulation or corporate collusion, is the best solution to energy scarcity and energy poverty.

STOP THE RADICAL CLIMATE AGENDA
