

Florida Gas Utility

Under the Sea, Above the Poverty Line

Hon. Jason A. Isaac | @ISAACforEnergy
Jason@AmericanEnergyInstitute.com

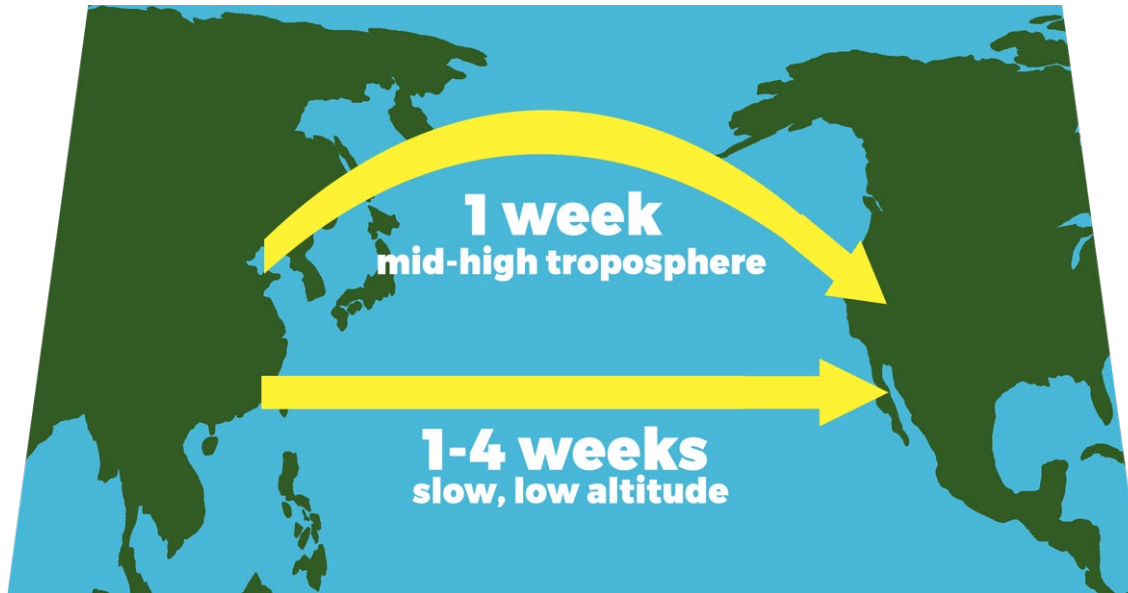

The US leads in clean air

- We've **reduced criteria pollutants by 78%** since 1970.
- Recent COVID shutdowns show just how clean our air is. In most cities, air quality did not meaningfully improve (and in some, it actually worsened).
- **62% of the population doesn't know this.**

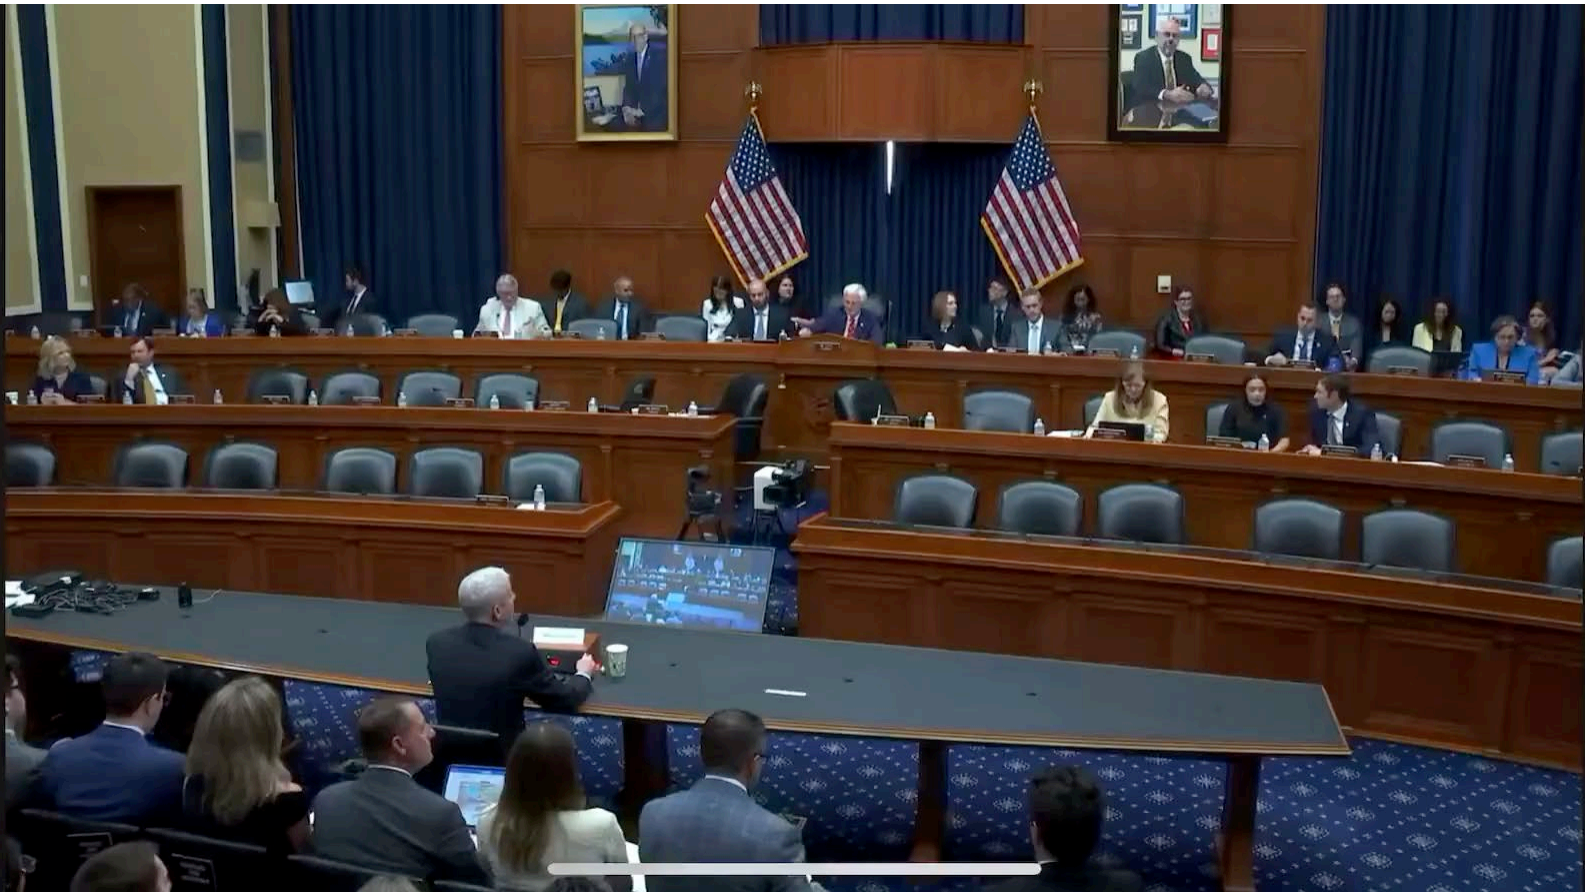

“Climate” Regulations: Exporting jobs, importing pollution

- Over 80% of mercury deposited in the U.S. is from natural sources and overseas emissions.
- The **tripling of ozone emissions from Asia** from 1988 to 2014 may have offset the 50% reduction in local emissions in the Western U.S.

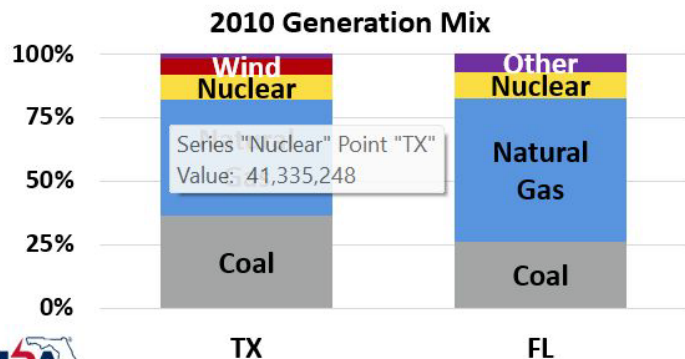

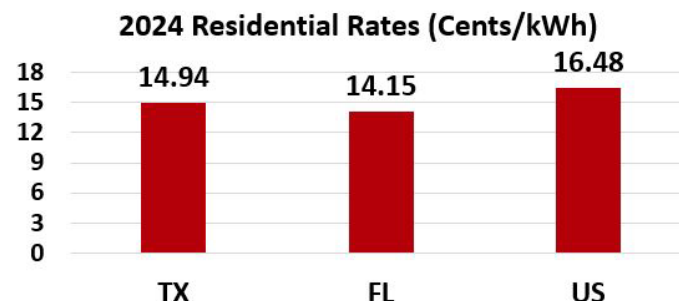

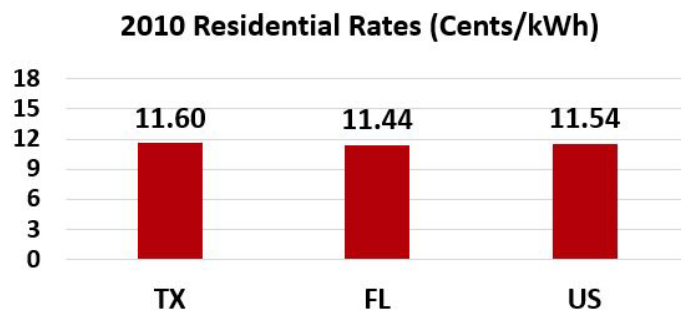

Why 'All-Of-The-Above' Energy Policies Fail

Oct 2025 HEADLINES

- *Florida stuns Texas*
- *Florida punishes Texas*

Florida Leaned into Shale Led Natural Gas – Low Price
Texas Shifted into Wind, Solar and Transmission to Integrate

Expensive energy hurts the poor

The Two Hundred, et al. v. California Air Resources Board

“California’s climate change policies... have caused and will cause **unconstitutional and unlawful disparate impacts** to California’s minority populations.”

“The ‘net zero’ GHG threshold would operate unconstitutionally so as to **disproportionately disadvantage low-income minorities** in need of affordable housing relative to wealthier, whiter homeowners who currently occupy the limited existing housing stock...”

800,000 Meters in California are behind on electric utility payments - 242,000 disconnected in 2023.

2025 - UPDATE: **3.4 million customer accounts** across the state’s major investor owned utilities are behind on their bills, with total arrears approaching \$2.2 billion.

Climate-related deaths have plummeted 98% in the last 100 years, even though the world's population quadrupled during that same period. While the earth is experiencing a period of mild warming, our resilience is improving at a much faster rate. In fact, deaths due to climate-related disasters are declining faster than deaths from other natural disasters like volcanic eruptions and earthquakes. It's clear

OFDA/CRED International Disaster Database, <https://public.emdat.be>, deaths averaged over decades 1920-29, 1930-1939, ... 2010-2019 placed at decadal midpoints (1924.5, 1934.5 etc), with average data for 2020-22 placed at 2021.5. 2023 is not finished, so adjusted for the historical fraction of deaths from Jan-Aug compared to full year for 2000-22. “the effect of man-made CO2 emissions does not appear to be strong enough to cause systematic changes in the temperature fluctuations during the last 200 years.” Paleoclimatologists now believe that CO2 doesn't drive temperature, but vice versa. Research suggests CO2 concentration spikes lag temperature changes by about 800 years.”

Foreign-Funded Opposition to U.S. Data Centers

\$39M+ from European donors fueling the campaign to halt American AI infrastructure.

\$39M+

Foreign Money, U.S. Targets

12 U.S. activist groups have collectively received more than \$39 million from foreign donors in Switzerland, the UK, and Denmark — including the Wyss, Hohn, Quadrature, KR, and Oak foundations.

230+

Coordinated Moratorium Push

In December 2025, 230+ leftwing organizations signed a letter demanding Congress impose a national moratorium on new data center approvals and construction — calling the industry an environmental and societal threat.

11 States

Activity in Your Backyard

Protests, lobbying days, and pressure campaigns documented in Louisiana, Texas, Utah, Michigan, Wisconsin, Minnesota, Ohio, Virginia, Indiana, Georgia, and California — driven by 350.org, Sierra Club, and Indivisible chapters.

Captured Courts

The National Academies, the Federal Judicial Center, and climate lawfare.

01

A Compromised Reference

The Reference Manual on Scientific Evidence, Fourth Edition — co-published by NASEM and the Federal Judicial Center — embeds plaintiff-aligned theories on climate causation and attribution into the authoritative resource judges rely on nationwide.

02

Undisclosed Conflicts

The Manual repeatedly cites Michael Burger of Sher Edling LLP — the lead plaintiffs' firm in climate litigation — without disclosing his role. NASEM, heavily funded by federal dollars, has refused to remove the chapter even after the FJC quietly omitted it.

03

Congressional Action Needed

The House Judiciary Committee opened a formal inquiry in January 2026. AEI calls for the Fourth Edition to be rescinded, appropriations to be conditioned on neutrality, and an independent review of the Manual's authorship and sources.

Policy Recommendations

Pension Protection Act

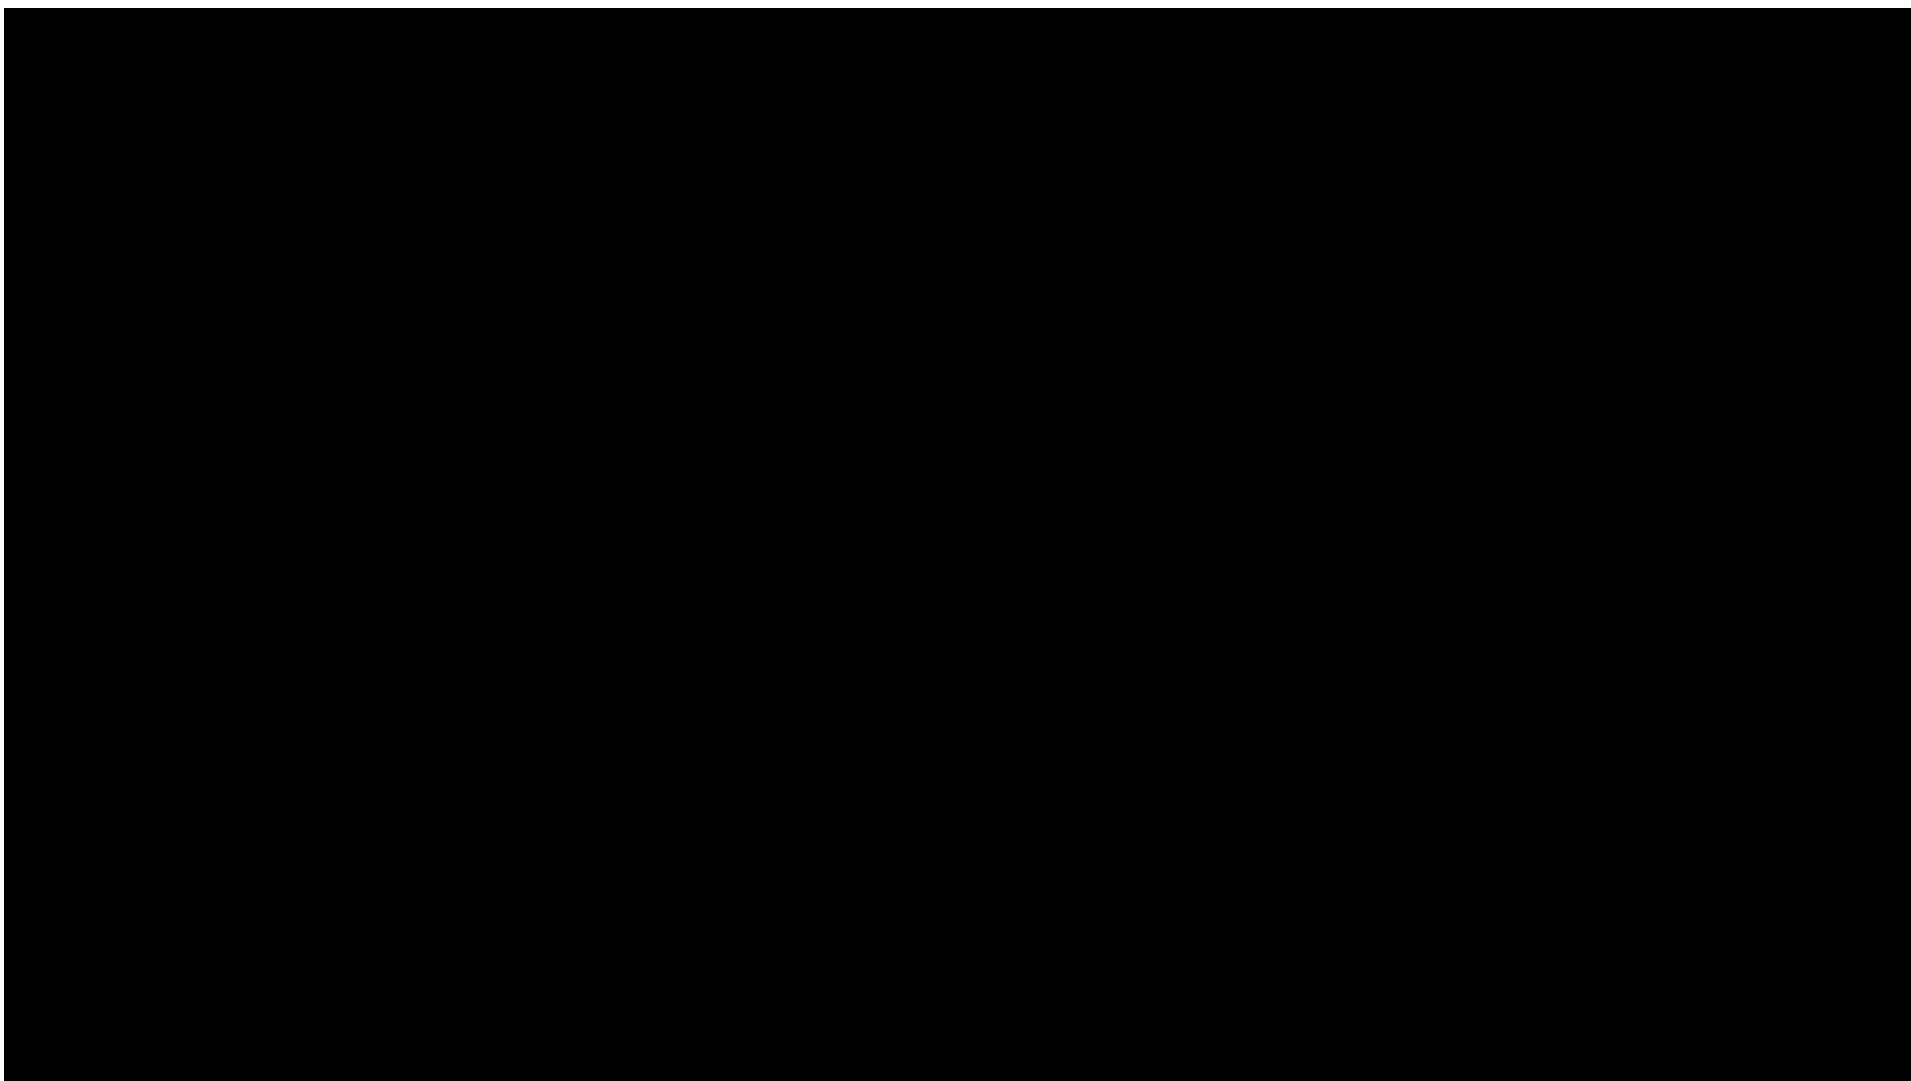

Pensions should be managed with fiduciary duty first and foremost. Restrict companies that embrace ESG from managing state pension/endowments.

Farmer Protection Act

Prohibiting banks, Insurance companies, and financial institutions from restricting services to farmers/ranchers. Forestry, or fossil fuels based on environmental policies.

Ban Compliance with CA/EU Climate Reporting

The EU and CA force U.S.-based companies to adopt ESG-aligned governance and climate risk frameworks across their global operations

SUPPORT AMERICAN ENERGY SIGN THE PLEDGE...

You agree to actively support and promote the following key principles:

- 1 Affordable, reliable energy is the key to human flourishing.
- 2 American energy dominance is a benefit to our economy, quality of life, national security, environmental stewardship, and efforts to end poverty around the world.
- 3 Environmental policy should serve humanity, not the other way around.
- 4 Unleashing the power of free-market innovation, not government market manipulation or corporate collusion, is the best solution to energy scarcity and energy poverty.

STOP THE RADICAL CLIMATE AGENDA
